Profile

UI/UX Manager with over 20 years of front-end dev experience and 8 years of UX. Versatile professional with experience ranging from large corporate endeavors to smaller, startup-based projects.

I love cars, the outdoors and gaming (when I have time). I'm always looking at details in everyday situations and seeing how I can use them creatively as a design/theme.

Skills

HTML 5	Research
CSS 3.0	Workflow
Bootstrap 4.3	Design
Responsive	Documentation
Accessibility	Figma
Design	Visual Studio
Wireframes	Git

Certifications & Groups

General Assembly – Certificate in Visual Design

UXPA – User Experience Professionals Association

LinkedIn Groups – UX Professionals, UI/UX User Experience Interactive Designer/ Wireframes, Angular 2, Xamarin Developers, CSS Designers & Developers

Work

Likewise

June 2021 – Present

UI/UX Manager

I manage a team of Front-End Engineers and Designers with a focus on UX. We work with multiple teams to design and deliver quality flows, wireframes, mocks and end applications ensuring they're all responsive and accessible.

My team and I have done user testing via different methodologies to validate designs and test new ideas.

Mentoring and growing my people is a top priority. I ensure that they always have avenues of growth in the areas of their interest (even when that area isn't in UI/UX.)

Brightstar

Feb 2017 – June 2021

Lead UI/UX Engineer

Manage a small team responsible for UX standards and appearance.

Applied a UI refresh on the core web application to make it easier to read and more modern. Aided in the design of the new mobile application and did all the front-end code. (Xamarin-Xaml)

Trained and worked with most of the developers on front-end standards, responsive design and accessibility.

Nextgear Solutions

Aug 2014 – Feb 2017

Senior UI/UX Engineer

Updated Enterprise web application with a new UI that increased code reusability and decreased the overhead. Customers thought the application ran faster post release and we saw a jump in satisfaction and use.

Redesigned the mobile application using new technology (Xamarin Forms) to increase the user acceptance and ease of use compared to the current mobile application.

LexisNexis

Sep 2008 – Aug 2014

Senior Software Engineer

Worked on a new stand-alone C# web application that was a rewrite to an existing installed application. Worked with a remote team gathering information on what wasn't documented to meet requirements.

Delivered 2 XML/XSLT integration applications used during the merging of products after an acquisition that were released earlier than expected saving hundreds of thousands of dollars.

Implemented designs from our UI department and worked with engineers to span the gap from conception to delivered functionality on new efforts.
